SETUP PROCESS TO RUN KIJIJI AUTOBOT SCRAPPER

STEP 1: Install Visual Studio code:

- Go to https://code.visualstudio.com/download to download extension
- Under the windows icon look for user installer and select either 64bit, 32bit or ARM button to download.
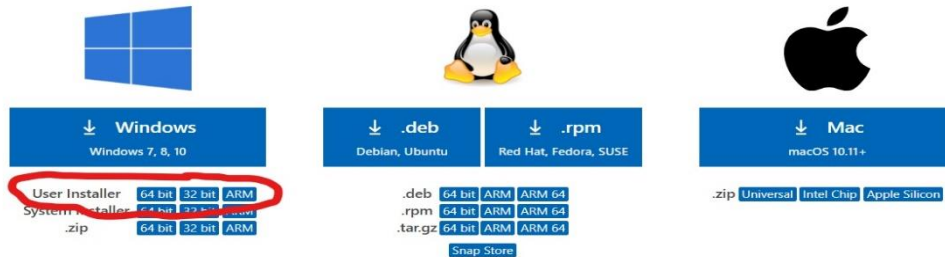

- Alternatively, you can run the 64bit installer already downloaded in the setup folder of this app, the file name is vscode64 (path: KIJIJI-AUTOBOT-V2.5/setup/)
- Follow this video exactly to install it https://youtu.be/MlIzFUI1QGA?t=52 (you do not need to watch the full video start the current time set by the URL and stop at 1:54 time of the video)

STEP 2: Open Kijiji folder with VScode

- If VScode is installed properly right click on Kijiji folder, you should see open with code option, select it.
- Press CTRL + ` to open terminal or go to view and select terminal
- In the terminal type **cd setup/**
- And then run the command **python setup.py** in the terminal
- Check Log folder and open any file that starts with the name setup in the VScode
- See if the last line of the file reads **Setup Module: Environment Setup Completed**
- If so then setup is complete
- In terminal type **cd ../src/**
- And then run **python main.py in terminal**
- Application should start running
-
